Novell SAML Extension 1.0.1 for IChain Contact Drew Nowak at dnowak@novell.com	All web servers. iChain is based on an HTTP reverse proxy. This combined with its ability to transform SAML information into standard web headers and query strings, means that there are no restrictions on the type of web server.	The iChain SAML server runs on any Intel hardware, running NetWare, MS Windows, or Linux. The iChain Proxy must be hosted on Intel based hardware that is compatible with Novell NetWare 6.	iChain supports Novell's eDirectory. Other directories can be supported with Novell Identity Manager.	Not Applicable	The standard enterprise user license list price is $10 per user. B2C and G2C licenses list prices are 25% and 10% of enterprise license list price.
